

Dear FCC

XM Satallite radio revolutionized my family's life! In our area the reception of some radio stations is poor and if it weren't for XM Satallite radio some types of information would just be hard to get. The variety of information and variety of channels available from XM is extremely valuable to myself and my wife.

Please don't let the NAB limit the type of traffic and weather and other information XM is allowed to transmit. It would be harmful to Americans living in areas where hills and valleys and other obstacles hurt regular radio reception. Denying XM the ability to broadcast the widest variety of information would be to deprive some Americans of the only reliable source of that information they have.
